

# CASE STUDY – Green Climate Funds

Your government has received a US\$5,000,000 Grant from the Green Climate Funds to develop a programme to address the impact of Climate Change on Chronic non-Communicable Diseases (NCDs). You have been given the responsibility to design and develop the programme for **one NCD**.

Priority Setting	How would you decide which NCD to choose? Do we need data on each? What is the rationale? Etc.
Situation Analysis	How would you determine the burden of the condition chosen including the risk factors associated with the condition. How does climate change exacerbate the condition?
Community Engagement	Who are the Communities (individuals, NGOs, Policymakers, etc.)? How would you engage them?
Capacity Strengthening	Beyond training, what other systems would need to be developed to support the work of the programme?
Health System Strengthening	How can health systems become more resilient to climate change? What mitigation and adaptation interventions are needed?
