

# KEY COMPONENTS OF A FEMALE-FRIENDLY TOILET

Adequate numbers of safely located toilets separated (with clear signage) from male facilities.

Some units should be accessible to people with disabilities

A shelf and hook for hygienically storing belongings during usage

Easily accessible water (ideally inside the cubicle) for girls and women to wash themselves and menstrual materials

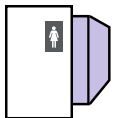

Safe and private toilets with inside door latch

Clear signs instructing girls and women to dispose of menstrual waste in the trash bin or chute

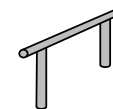

Night time light source both inside and outside of the toilets

Walls, door and roof are made of non-transparent materials with no gaps or spaces. Entrances should be screened so that people cannot be seen entering and leaving the cubicle itself

A chute for discreet disposal of menstrual materials  
OR  
Trash bins (with lids) to dispose of used menstrual materials

Grab bars to assist pregnant, elderly or disabled persons – format can vary and is to be discussed with users
