MENSTRUAL DISPOSAL: FOUR KEY ELEMENTS

How will the disposal strategy (e.g. bin, chute) minimize opportunities for others to view this waste? How will the design promote confidence among girls & women?

How will the disposal and waste management systems be communicated to girls & women? How will feedback be solicited?

How will the disposal strategy be maintained over time (e.g. emptied, cleaned, frequency of service)?

What type of final disposal method will be used for collected menstrual waste (e.g. burning, waste pits)? Is this method acceptable to girls and women?

This figure is part of a larger project examining how to better support the menstrual disposal, waste management and laundering needs of displaced girls and women. To learn more visit our [website](#).
