

ME/CFS Volunteers Needed

The Center for Solutions for ME/CFS at Columbia University, one of three NIH-funded ME/CFS research centers, is recruiting ME/CFS patients for a study of the impact of exercise on the microbiome, the metabolome, the proteome and the epigenome.

Subjects will be selected based on results of a questionnaire, a history and physical exam performed by expert ME/CFS clinician Dr. Sue Levine, baseline blood work, and ability to participate.

Participation involves a total of three visits on three separate days (screening at the clinic of Dr. Levine, exercise tolerance testing and follow-up at the Columbia University Medical Center).

Subjects will be provided with support for travel to the Columbia University Medical Center as well as compensation totaling \$125 in gift cards upon completion of the study. Due to financial constraints we are only recruiting subjects from New York City who live in the boroughs of Manhattan, Brooklyn, Bronx or Queens.

For more information and to find out if you are eligible, please contact the office of Dr. Susan Levine (email preferred):
